Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Drawings

1. The drawings are objected to because Figure 1 is missing description labels for elements "32" and "34". Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1- 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Mattson et al. (US 7,068,608).

Regarding claims 1 and 4, Mattson teaches defining test message data (message 50; col. 7, lines 43-67; col. 8, lines 1-15); incorporating the test message data into a sequence of trace octets embedded in synchronous optical data frames (col. 8, lines 30-34; message 50 inserted into data frame 30), said trace octets comprising at least one of section trace, path trace and lower-order path trace sequences (col. 4, lines 5-9; col. 7, lines 34-40); transmitting the synchronous optical data frames over a synchronous optical path to be tested (col. 4, lines 5-9; further described in col. 8, lines 22-41); receiving the synchronous optical data frames after they have traversed the synchronous optical path (col. 8, lines 32-34); extracting the incorporated test message data (col. 8, lines 35-37 and 63-65); and comparing the extracted test message data with the defined test message data to test automatic path protection switching of the synchronous optical path (col. 8, lines 63-67; col. 9, lines 1-6; also described in col. 5, lines 57-64).

Regarding claim 2, Mattson teaches the method of claim 1, wherein the step of defining test message data comprises adopting data inserted by user applications in the trace octets as the test message data (col. 8, lines 28-32).

Regarding claim 3, Mattson teaches the method of claim 1, wherein the step of defining test message data comprises receiving trace messages incorporated in synchronous optical data frames (col. 7, lines 34-40) and editing the received trace messages to define the test message data (col. 7, lines 33-40).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
